

EXAMPLE ENERGY CO.

\$913 Million EOR Investment
Example Energy Co. – Example Capital
Partnership
Enhanced Production & Decarbonization

EXAMPLE CAPITAL

This is a sample version of an investment proposal, created for a personal portfolio. The operator, firm, and partner names are fictional or generalized, and all contact and identifying details have been removed.

Foreword

08 August 2026

Example Capital Ltd (“**Example Capital**”) is honoured to propose up to a \$913 Million Investment in Enhanced Oil Recovery (“**EOR**”) in Example Energy Co. (“**Example Energy Co.**”) Oilfields.

EOR can double oil production by increasing productivity 50% and extending the lifespan of Oilfields. As a result, the CO₂ footprint/bbl will decrease by over 35% and H₂S will significantly be reduced.

The Technology Partners

Our EOR technology partners are leading global chemical, water, and oilfield technology companies (the “**Tech Partners**”).

- EOR has been applied in thousands of oil wells across the globe with over 95% success rate
- Our Tech Partners manage several million bbl/d oilfields with EOR applications
- Oil operators using EOR include all the major IOCs/NOCs in the world

The Service Providers

EOR treatments are applied by major oilfield service companies (the “**Service Providers**”).

Results of a Proposed Example Capital EOR Investment

Assuming 50,000 bbl/d oil wells, 84% water cut, 15% oil decline/year, lifting, transport and marketing costs totalling \$11/bbl, and an inflation rate of 2.5%, the EOR Investment is expected to yield the following results:

Example Capital Investment

- \$913 Million

Example Energy Co. Production Benefits

- Production increase from trapped oil: 226 Million bbl (\$15.1 Billion)

Example Energy Co. Incremental Net Profit/Cash

- Net cashflow available to Example Energy Co.: \$11.9 Billion

Example Energy Co. ESG Benefit

- 35% decrease in both CO₂ and lifting costs, as well as a significant reduction in H₂S

No Cure No Pay Pilot Test

With the chosen Tech Partner, Example Capital will fully underwrite a No Cure No Pay Pilot Test on a single 100 bbl/d well. Following its success, Example Capital and Example Energy Co. will negotiate a full oilfield implementation plan. The terms of the Pilot Test are found in the final pages of this document.

Example Capital and its Tech Partners are committed to assisting Example Energy Co. in achieving its strategic production and financial objectives, delivering a zero-cost, zero-risk, and highly profitable outcome.

Should Example Energy Co. wish to proceed with the Pilot Test, Example Capital will be looking forward to a mutually rewarding long-term relationship.

We await your response with much anticipation.

Sincerely yours,

Rishi

Associate VP – North America

INDICATIVE TERMS AND CONDITIONS

These indicative terms and conditions are presented to Example Energy Co. ("Example Energy Co.") to define the principal terms and conditions set by Example Capital Ltd ("Example Capital") to invest in an EOR Treatment in a Pilot Test to a designated Choice Well (the "Term Sheet"). This Term Sheet does not represent an offer to invest and must be revised following due diligence, including required data from Example Energy Co., a comprehensive EOR Analysis Report and a quote from the Tech Partner.

Principal Parties

Oilfield Operator	: Example Energy Co.
Investor	: Example Capital ("Example Capital")
EOR	: Organic Oil Recovery, a biophysics technology which exploits existing micro-organisms to increase oil production from trapped oil.
EOR Technology Provider	: Leading global chemical and water-technology companies (the "Tech Partners")
EOR Service Provider	: Major oilfield service companies or their equivalent ("Service Providers").

EOR Application

Choice Well	: [100] bbl/d production suitable for EOR treatment.
EOR Report	: Tech Partner will produce a comprehensive report recommending a plan of action to treat the Choice Well with EOR. The report will be updated quarterly.
EOR Quote	: Tech Partner will submit a final quote for the EOR services provided over the 5-year period, satisfactory to Example Energy Co. and Example Capital.
EOR Treatment	: Service Providers and Tech Partners will apply EOR treatments.
EOR Cost	: Example Capital will fully underwrite the cost of the EOR Treatment.
Duration	: Five Years, if and only if the Pilot Test is a Success.
Success	: Success will be a production increase of more than 20% in the Choice Well.
Term	: Following Success, EOR will be applied on the Choice Well for [5] years.

Baseline

Baseline	: Future bbl/d Choice Well production, jointly determined by Example Energy Co. and Example Capital.
Breakeven Point	: Projected Baseline Line plus Example Capital's EOR Investment.

Oil Revenue Waterfall

First Claimant	: Example Energy Co. to receive the Projected Baseline.
Second Claimant	: Example Capital to be reimbursed for the EOR Investment from the oil revenue above the Baseline but below the Breakeven Point.
Third Claimant	: Example Energy Co. will receive the remaining oil revenues minus the Example Capital Share.
Example Capital Share	: \$[20] for each incremental barrel of oil produced above the Breakeven Point.

EXAMPLE ENERGY CO.**\$1,700,000 EOR INVESTMENT****NO CURE NO PAY PILOT TEST****INDICATIVE TERMS AND CONDITIONS****(cont'd)****American Optionality**

Projected Investor Share	: Example Capital Share will be jointly forecasted by Example Energy Co. and Example Capital using standard mathematical methods in the oil industry.
Exercise Date	: Any time after the first anniversary of the first EOR Treatment.
Exercise Price	: Present value of the Projected Example Capital Share discounted by 10% per annum.
American Call Option	: Example Energy Co. shall have the American Call Option at the Exercise Date to purchase the Projected Example Capital Share at the Exercise Price.
American Put Option	: Example Capital shall have the American Put Option at the Exercise Date to sell the Projected Example Capital Share to Example Energy Co. at the Exercise Price.

Expenses

Transaction Expenses	: The approved Lab and Legal expenses below will be refunded and paid by Example Capital at the implementation of the Pilot Test.
-----------------------------	---

Lab Work: lab analysis on a water sample from [1] Producer Well will be initially borne by Example Energy Co., estimated at [\$20,000].

Legal Expenses: legal expenses and other transaction costs will be initially borne by Example Energy Co., estimated at [\$30,000].

Steps to EOR Pilot Test

1. Sign Agreement	: Sign agreement between Example Capital and Example Energy Co. to apply EOR.
2. Reservoir Data	: Submit reservoir data to determine suitability of EOR treatment.
3. Choice Well	: Jointly choose the Choice Well following data analysis.
4. Fluid Samples	: Collect fluid sample from the Choice Well to be sent to the Tech Partner Lab.
5. Lab Analysis	: Following a favourable Lab Report, the Tech Partner will design a suitable EOR Treatment.
6. Field Analysis	: Field analysis to make sure equipment and other field data are appropriate.
7. Pilot Test	: EOR Treatment will be applied to the Choice Oil Well to prove Success.

Assumed Example Energy Co. Choice Well Parameters

Choice Well	: 1. Conventional/Non-Conventional Oil Well (preferably water flooded) 2. Production: [100] bbl/d 3. Production, Transport and Marketing Cost: \$10/bbl 4. Inflation: 2.5% 5. Rate of Oil Production Decline: 10% 6. Water Cut: 84% 7. API Gravity: inside 12-48 8. BHT: Below 120° C 9. Permeability: above 50 md 10. TDS: Below 240,000 ppm 11. Porosity Range: inside 14-30% 12. pH in the neutral range: 6.0 to 8.0
